Solid Results/Guide on Continued Strong AI Demand Pull And Hopper Ramp - Implemented Fix For Blackwell Yield Challenges And Production Ramp Begins In F4Q

NVIDIA reported Jul results (revenue/GMs/EPS) above consensus estimates and slightly lower than market expectations (in our view), and off of a higher Jul-Qtr revenue base, the team guided to a 8% Q/Q increase in the Oct-Qtr, above consensus (again a bit lower than market expectations) on continued strong spending from its customers to support their AI/accelerated compute initiatives (both training/inference) and the strong demand pull for for its Hopper H100 and new H200 GPU platforms. Indeed, the team expects a stronger 2H for Hopper with Q/Q shipment growth in 3Q, and potentially higher Q/Q again in 4Q depending on supply unlock for its next-gen Blackwell shipments. On the next-gen Blackwell platform, the team has implemented a mask change to the Blackwell GPU (two-die original version using CoWoS-L) which has remedied the manufacturing/yield challenges and the team remains committed to shipping its original line-up of products (B100, B200, GB200). The team will enter production ramp in the Jan-Qtr (we believe about a 2 month delay from original schedule due to the mask fix) and should drive several billion dollars of revenue in the Jan-Qtr. Demand for Blackwell is very strong and will outstrip supply at least through the middle of CY25, in our view. While Blackwell shipments are pushed out as we expected by about 2 months, we do not believe this has any impact to the overall CY24/CY25 revenue profile as that void has been back-filled with Hopper shipment upside given the strong AI demand environment. China sales we estimate were 8-10% of datacenter revenues in the July-Qtr and was a strong contributor but continues to be below its peak levels of 25%. On networking, the team is driving ~$15B in annualized revenue run-rate and the team still has the Quantum X800 product cycle ahead. Software is also gaining strong traction led by Nvidia AI enterprise and is expected to approach $2B in annual run-rate exiting this year. The negative surprise was the lower GM profile exiting the year as full year GM guidance of mid-70s implies GM deceleration to low-70s exiting the year (we estimate 73%), we believe driven by higher ramp up costs/lower production yields of new Blackwell solutions. We expect gross margins to improve throughout next year on improving yields and better cost absorption. Bottom line, the team continues to maintain a 1- 2 step lead ahead of competitors with its silicon/hardware/software platforms, and a strong ecosystem (4M CUDA software developers) and the team is further distancing itself with its aggressive cadence of new product launches and more product segmentation over time. We increase our forward estimates and establish our Dec-25 PT of $155 (from our prior PT of $115), and reiterate our OW rating.

Summary Investment Thesis and Valuation

Investment Thesis

We believe NVIDIA continues to execute across all segments. While 1H is typically seasonally weaker than 2H, we expect solid demand in PC gaming to be a strong revenue driver for the company, offsetting PC OEM, which is in secular decline. We expect the data center segment to grow strongly as hyperscale customers continue to embrace GPU-accelerated deep learning for processing large data sets. We are encouraged by strength in the automotive and enterprise segments as well, although strong adoption of autonomous driving in the market remains to be seen. We anticipate significant upside in the shares, driving our Overweight rating.

Valuation

Our Dec-25 PT assumes that NVIDIA trades at a 35x multiple applied to ~$4.40 of annualized earnings power in 2H of CY25E. Our earnings multiple is consistent with its potential earnings CAGR of 30-35%+ over the next few years led by the continued strong datacenter growth, monetizing an incremental ~$14B of auto revenue pipeline and incremental software, licensing, and subscription revenues over the next several years.

- **Strong F2Q25 (Jul-Qtr) results led by continued strong AI demand pull and ramp of H200 platform.** NVIDIA reported F2Q25 revenue of $30.0B (up 15% Q/Q), above consensus ($28.9B) led by the continued strong demand pull for its its Datacenter solutions. Datacenter revenue grew 16% Q/Q on strong demand pull for Hopper solution and its new H200 platform ramp (DataCenter Compute up 17% Q/Q) and networking products (up 16% Q/Q) . Gaming revenues were up 9% Q/Q on seasonal strength. Pro Vis grew 5% Q/Q. Auto was up 5% Q/Q on continued ramp of its intelligent cockpit compute solutions and autonomous platforms. GM of 75.7% was above consensus (75.5%) on product mix. EPS of $0.68 was above consensus. We estimate that China datacenter revenues were about 8-10% of the datacenter mix in the July-Qtr.
- **F3Q25 (Oct-Qtr) guidance above consensus on continued strong datacenter demand.** Oct-Q revenue guidance of $32.5B (up 8% Q/Q),above consensus ($31.9B) on continued strong Datacenter demand given the strong demand pull from Generative AI/LLMs and the continued ramp of the team's new H200 platforms. At the midpoint, in F3Q25, the team sees Q/Q growth led by strong Q/Q datacenter growth. GM is expected to be 75%. OpEx is guided to $3.0B. Implied EPS is $0.72, slightly above consensus of $0.71.
- **Datacenter revenue continues to accelerate in CY24 and should continue into CY25; Blackwell production ramps begin in F4Q…and the team remains supply constrained on Blackwell at least through the middle of next year, in our view.** Demand was strong for AI inference and training and the customer profile appears to be positively broadening to sovereign government. On Blackwell, the team will enter production ramp in the Jan-Qtr and should drive several billion dollars of revenue in the Jan-Qtr. Demand for Blackwell is very strong and will outstrip supply at least through the middle of CY25, in our view. While Blackwell shipments are pushed out as we expected, we do not believe this has any impact to the overall CY24/CY25 revenue profile as that void has been back-filled with Hopper shipment upside given the strong AI demand environment.
- **Increasing forward estimates and increasing our PT to $155**. We increase our forward estimates and initiate our CY25 estimates. We establish our Dec-25 PT of $155 (from our prior Dec-24 PT of $115). We remain Overweight NVDA. Our PT assumes that NVIDIA trades at a 35x multiple applied to ~$4.40 of annualized earnings power in 2H of CY25E.

Investment Thesis, Valuation and Risks

NVIDIA Corporation *(Overweight; Price Target: $155.00)*

Investment Thesis

We believe NVIDIA continues to execute across all segments. While 1H is typically seasonally weaker than 2H, we expect solid demand in PC gaming to be a strong revenue driver for the company, offsetting PC OEM, which is in secular decline. We expect the data center segment to grow strongly as hyperscale customers continue to embrace GPU-accelerated deep learning for processing large data sets. We are encouraged by strength in the automotive and enterprise segments as well, although strong adoption of autonomous driving in the market remains to be seen. We anticipate significant upside in shares, driving our Overweight rating.

Valuation

Our Dec-25 PT assumes that NVIDIA trades at a 35x multiple applied to ~$4.40 of annualized earnings power in 2H of CY25E. Our earnings multiple is consistent with its potential earnings CAGR of 30-35%+ over the next few years led by the continued strong datacenter growth, monetizing an incremental ~$14B of auto revenue pipeline and incremental software, licensing, and subscription revenues over the next several years.

Risks to Rating and Price Target

- Although PC gaming demand seems resilient to macroeconomic weakness, any macro uncertainty could weigh on PC gaming demand trends. Given NVDA's ~53% exposure to the PC gaming segment, any consumer PC gaming weakness poses downside risk to our estimates.
- NVIDIA's GPUs could gain lower than expected deployment into data center applications as hyperscale customers further adopt deep learning as a new and effective way of processing large unstructured data sets. Any significant decrease in the adoption of deep learning by hyperscale customers or increase in competition could result in downside risk to our revenue and earnings estimates.

J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over

the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.
