

[Weekly Market Commentary](#)

Dear clients,

We remain constructive on crypto markets for 1Q25 due to potential catalysts coming from both the US and abroad. However, in the near term, there are some key developments to watch as we wrap up the year. Today (December 13), the Nasdaq 100 will announce its annual additions and deletions after market close, and there's a good chance that it could include MicroStrategy (MSTR). This could lead the many passive vehicles benchmarked to the Nasdaq to purchase MSTR, representing new money with indirect exposure to MSTR's bitcoin stockpile. Meanwhile, the final Federal Reserve meeting of 2024 is anticipated to result in a 25bps rate cut, though we anticipate greater policy uncertainty in 2025.

Despite high levels of liquidations over the last week, BTC and ETH prices have held up well, staying near their highest levels of the year – indicating strong opportunistic buying interest. Both BTC and ETH spot ETFs have continued to see positive inflows daily throughout December, with ETH in particular experiencing a significant reversal in previous flow trends. Notably, leveraged ETF flows reflect this growing bullish sentiment, with outsized interest for ETH over BTC.

Finally, we are releasing our 2025 Crypto Market Outlook next week, which will be our last publication of the year. That means this report will be the last weekly market commentary of 2024. We wish all our readers a joyful holiday season and a prosperous new year!
