

Dear Clients,

Overall, no major changes to our short term outlook. The risk-reward balance in crypto markets continues to give us relatively low confidence in a strong short-term directional view, though we remain constructive for 3Q25.

Corporate treasury flows into crypto surged during the last week of July, with public companies aggressively acquiring over \$7.8B in new crypto investments during that period. Comparatively, activity has been more muted during the first week of August.

US-based spot BTC ETFs saw \$1.36B in net outflows during the week ended August 6, a notable shift from the large inflows observed in July. Spot ETH ETFs saw net withdrawals totaling \$492M over the same period.

Bitcoin options open interest has picked up in the last four weeks with demand focused on puts, which has driven the 25D put-call skew on shorter-dated BTC options (30-day) to some of their highest levels in over 18 months. To start the month, the skew peaked at around 10.8% before moderating, just shy of the 11.5% observed in early April.

On the regulatory side, President Trump signed an executive order that allows alternative assets like crypto to be included in 401(k) retirement plans, ordering the Labor Department to reassess its guidance on such investments and clarify the fiduciary responsibilities involved.

Looking ahead, we think the Jackson Hole Economic Symposium on August 21-23 will be the next major macro event to watch, though following the re-weighting of market probabilities for a rate cut in September (due to the nonfarm payroll revisions), we think monetary policy may start to carry less significance for market sentiment in 3Q25.

SEC staff says “ministerial” liquid-staking programs are NOT securities, but the ruling is conditional and non-binding. We think the regulatory green-light, efficient yield pass-through and inclusion of LSTs in institutional products could supercharge adoption.

On Ethereum, exit queues spiked above 700k ETH in late July but has since eased, following ETH’s retreat from its recent \$3.8k peak. The Pectra upgrade has not materially shortened exit-queue wait times, as large-scale validator consolidations may not happen until 1H 2026. Looking ahead, we think expanding LST

penetration, growing corporate-treasury balances and a potential wave of staking ETFs could make exit queues a systemic pinch point, dampening the yields that ETFs can offer.

Pump.fun has clawed back market share. Over the past week, Pump.fun's revenue share grew from ~20% to slightly over 50%, reversing a multi-week decline. While launchpad revenues had been coming down since mid-July, they have recently recovered their previous averages. Stronger user activity and higher “graduate” retention reinforced Pump.fun’s comeback.

Finally, we just published our latest report [Bitcoin, Liquidity, and Macro Crossroads](#). Despite signals of tempered growth and risk appetite, underlying sentiment remains constructive for long-term bitcoin upside, supported by rising global liquidity, a forthcoming Fed rate cut, and strong onchain fundamentals indicating limited sell pressure.
