

[Weekly Market Commentary](#)

Dear clients,

The macro environment has continued to shape the performance of digital assets this week in the absence of strong crypto-specific catalysts. Amid a slower week for economic data, the market's attention has been more focused on fiscal developments, as the path for US deficits looks less uni-directional than it once did. The US House of Representatives will vote on its budget proposal next week, but the real hurdle will be reconciling their ambitious plans on spending cuts and the debt limit with the Senate's proposal, in our view.

Meanwhile, the recent 13F filings for 4Q24 have revealed increased institutional interest in the US spot ETF complex. Institutional ownership of outstanding spot BTC ETF shares increased from 24.9% to 28.6%, while ETH ETFs experienced a sharper rise from 13.7% to 23.0%. Notably, the sovereign wealth fund of Abu Dhabi also disclosed \$437M in spot BTC ETF shares, reflecting growing interest in the asset class by sovereigns.

Finally, memecoins have gathered a large amount of attention recently, particularly around allegations of insider trading. This has weighed particularly heavily on Solana, where investor sentiment for SOL has been further dampened by upcoming unlocks and a short-term bump in supply related to SIMD-96. That said, revenues towards memecoin platforms such as pump.fun remain strong, and we think that these bad actors remain distinct from the technological prowess of the network itself.
